

## Triggers

1. Create a trigger for table customer, which does not allow the user to delete the record who stays in Bangalore, Chennai, delhi
2. Create a triggers for orders which allows the user to insert only books, cd, mobile
3. Create a trigger for customer table whenever an item is delete from this table. The corresponding item should be added in customerhistory table.
4. Create update trigger for stock. Display old values and new values
5. Create Instead Of Insert Trigger for Joined View (the user should able to insert record for 2 table using single insert command) Use following table

```
create table a
(
  custid int,
  custname varchar(12)
)
```

```
create table b  
(  
    custid int,  
    product varchar(12)  
)
```

```
create view testview  
as  
select a.* , b.product from a inner join b on a.custid =  
b.custid
```

```
select * from testview
```
